HOT SAILS MAUI

Hot Sails Maui Hot Rod RDM masts are manufactured to the highest quality standards and are designed to withstand normal use in high surf conditions.

WARNINGS:

Windsurfing can be a dangerous sport. Serious injury or death may result from equipment failure or mishap. You are responsible for your own safety!

Equipment breakage can leave you stranded. Never sail alone.

Wear appropriate safety equipment.

Always check conditions before you sail.

Never sail in conditions beyond your ability.

Carbon fibre is electrically conductive, avoid contact with electrical lines

Never rig or sail in the vicinity of thunderstorms or power lines

CARE GUIDE:

Always store your mast in the bag provided

Avoid extreme temperatures, do not leave your mast in direct sunlight or store it outside in excessive cold or hot conditions.

Do not leave your mast rigged under full tension for extended periods of time. If you intend to leave your sails rigged keep them in a shaded area and release downhaul tension immediately after sailing. Periodically rotate mast 1/2 a turn to avoid a permanent bend developing.

Use only extensions designed for RDM masts and ensure that at least 12cm of extension is inserted into the bottom of the mast.

Always ensure the mast joint is free from salt and sand before assembly and ensure the mast joint is completely together before applying downhaul tension.

Always use the rubber boom shim supplied to attach the boom.

WARRANTY:

Hot Sails Maui will replace or repair at its option any mast with defects in materials or workmanship, for a period of one year from the date of purchase by the end user. If a mast fails during this time period, the consumer is instructed to return it to the store where it was purchased with the original sales receipt, and file a claim. This Warranty covers Hot Sails Maui masts only and does not cover death or bodily injury to the sailor, or any damage to other equipment!

Make sure the bottom section of mast is the right way up before inserting tip section. The labels are at the bottom of each section.

Avoid contact with sharp objects like rocks or railings. Impact damage can seriously damage the mast, resulting in failure during subsequent sailing sessions.

THE FOLLOWING WILL NOT BE COVERED UNDER WARRANTY:

- Use in wind exceeding 75mph (121 Kph)
- Use in breaking waves over 65 feet (20 meters)
- Abuse or misuse by the user
- Modification, alteration or previous repair
- Damage to equipment other than the mast itself
- Impact damage caused by rocks, reef, seawall, or other causes
- Breakage at the joint caused by incomplete joining of the sections
- Breakage at the base due to lack of extension inserted the mast. There must be at least 12cm of extension inserted into the end of the mast
- Breakage at the base or joint due to the bottom section of the mast being used upside down
- Breakage at the boom area when the mast shim supplied with the mast was not used
- Breakage at the tip when any mast tip plug other than the one supplied is used
- Damage caused by extreme temperature (<-10°C, >50°C)
- Bending of the mast if left rigged for extended periods of time
